TramForvard

Campaigning for Light Rail

What is light rail?

• It is rail-based rapid transit.

Kassel tram train outside Hbf.

- Light rail can run on former railway lines, alongside highways or in the street as a tramway.
- It can share tracks with train services to maximise use of the rail lines.

- Tram systems can access the heart of the city.
- They can share the city space with pedestrians.

• Light rail takes people right to where they want to go
